

## Laminated Steel Padlocks

PL40L, PL45L, and PL50L Series - Applications, Features, Care, and Pictures

### APPLICATIONS:

The 40 Series, 45 Series, and 50 Series laminated steel padlocks have a precision brass pin tumbler mechanism, are rust resistant, and resist hacksaw cutting. The shackle engages at both ends for greater security. Hundreds of key possibilities maximize lock integrity. Laminated steel padlocks are suitable for commercial or residential use; vispack and boxed packaging available.

### FEATURES:

**MECHANISM:** Laminated steel body and zinc plating for strength and rust resistance

**SHACKLE:** Hardened shackle resists cutting. Dual-locking shackle resists prying.

**SHACKLE DIMENSIONS:** For all dimensions refer to page F:5

**KEYING:** Keyed alike, keyed alike 2, keyed alike 4, keyed different

**PIN:** 4-pin tumbler cylinder for pick resistance

**KEYS:** 2 keys

### CARE:

Tips to keep the locks in the best working condition:

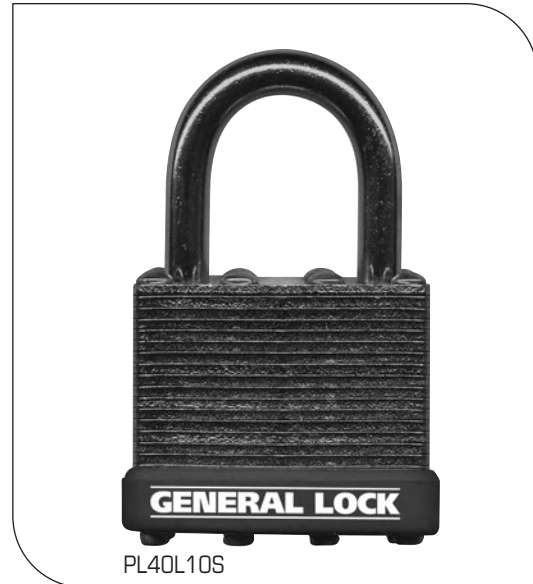

Lubricate the locks periodically with graphite or similar dry lubricant. Apply lubricant sparingly in both the keyway and shackle openings.

Your lock is only as strong as the handle / latch on which it is hung.

When the lock is operated rarely or exposed to harsh weather conditions, internal working parts may become tight. In such cases, you may apply a minor downward pressure on the shackle while the key is being turned.

### NOTE:

\* Laminated padlocks are available in the summer of 2007
